

Status Weekly Ξ_c^0 analysis meeting, Dec. 3

- **Status**

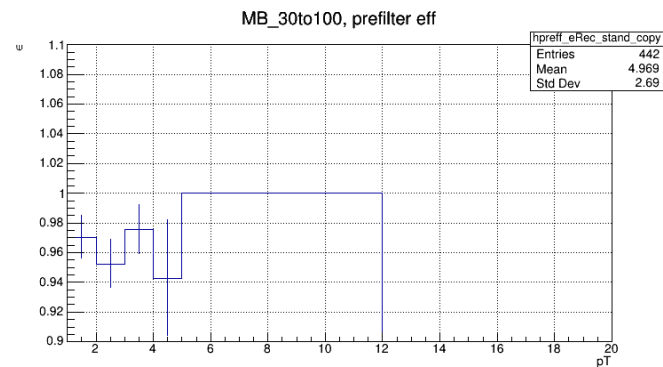

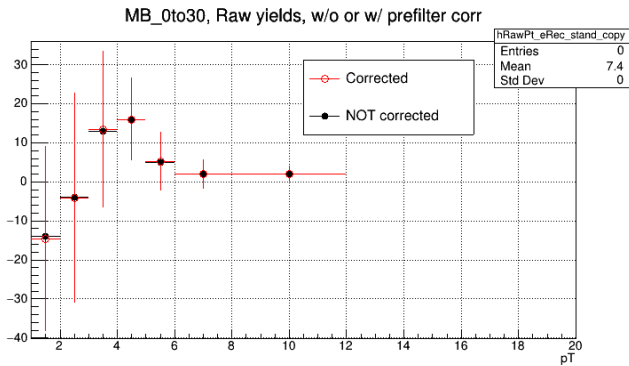

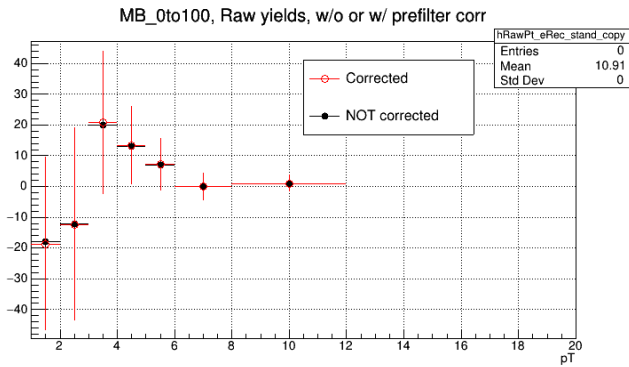

- **Main task code (AliAnalysisTaskSEXic0...) prepared and sitting in GIT repository**
 - a. Crosschecked w/ Dr. Bok, also now uses same steering macro (for Grid or Lego train)
 - b. The code works fine in the Grid, either by using ROOT5 (KIAF) or ROOT6 (alidock)
 - c. The code didn't pushed to AliPhysics yet, nor tested in the Lego train
- **Following later steps of the analysis**
 - a. Got small sample of data (whole LHC18p) and MC (LHC18MC3)
 - b. Finished porting Jinjoo's histogram production macro (*MakeROOTResultsXic0*):
now it can produce output w/ various trigger/multiplicity percentile setup (ex. HMV0 + [0.1, 30])
 - c. At least, the macro at b-2 runs fine and make an output successfully for these setups:
 - c-1. MB + [0, 100], MB + [0.1, 30], MB + [30, 100]
 - c-2. HMV0 + [0.1, 30], HMV0 + [30, 100]
 - c-3. HMSPD + [0.1, 30], HMSPD + [30, 100]
 - d. Question 1: in later analysis steps,
 - d-1. MCROOTFile: output histograms obtained by using default fit parameters [1.0, 1.0]
 - d-2. WeightedMCROOTFile: by using fit parameters from study (currently using " 1.97848e-00, -3.68931e-01 ")
 - e. Question 2: is it meaningful applying trigger (ex. HMV0) on MC files?
- **Sample plot of early steps:** prefilter corrected, bottom corrected distributions

New cuts Eventwise cuts added on “MakeROOTResultsXic0”

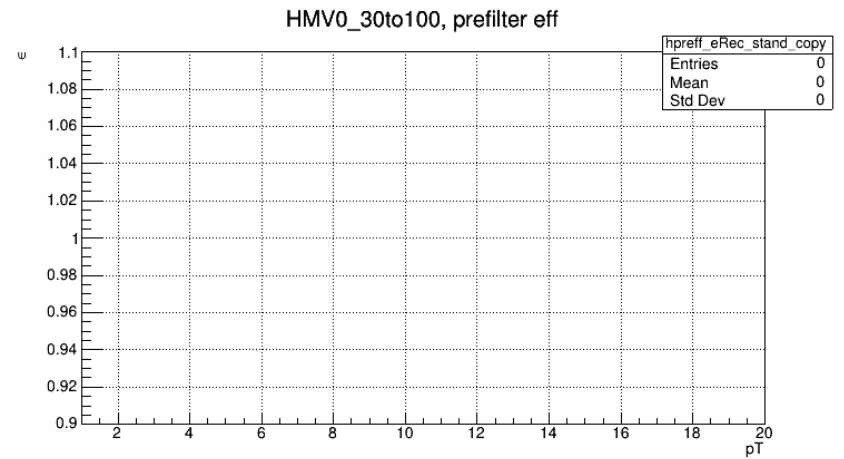

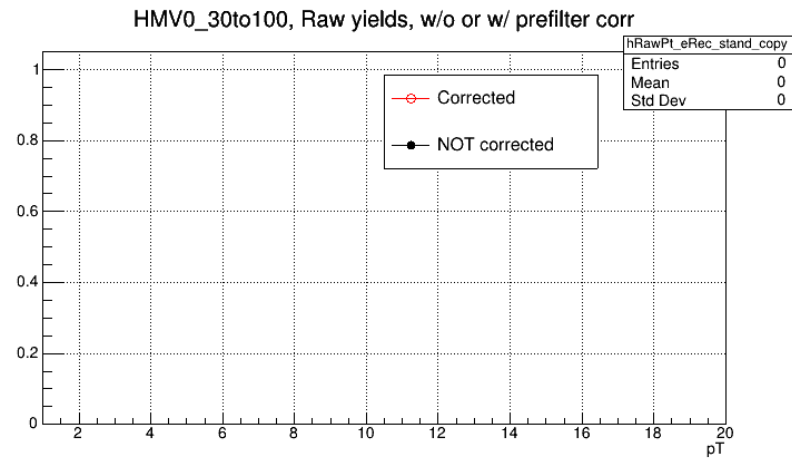

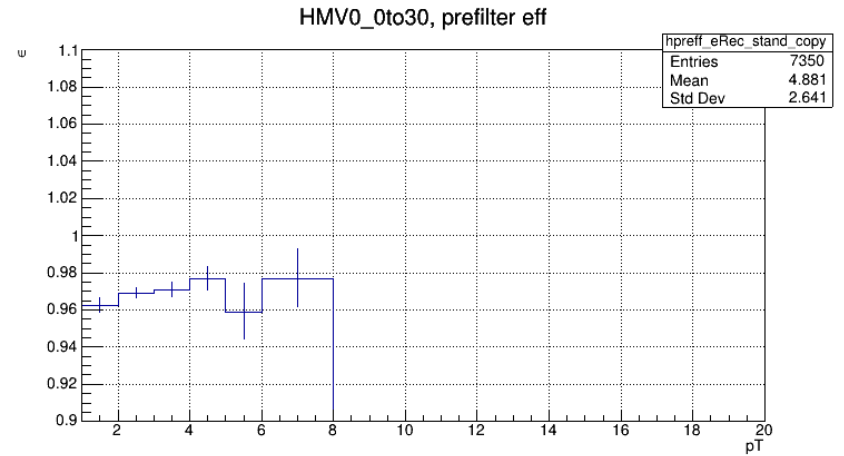

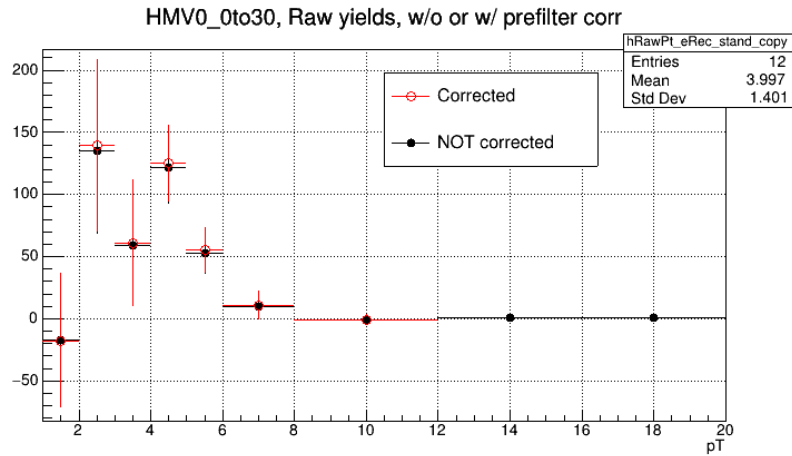

- **Eventwise cuts added**

- On “ MakeROOTResultsXic0 “, during loop over entries of eXi pair tree,
 - a. $252,000 < \text{runNumber} < 295,000$
 - b. Specific trigger: one and only one trigger required
 - b-1. MB
 - b-2. HMV0
 - b-3. HMSPD
 - c. Multiplicity percentile:
 - c-1. Require the event’s multiplicity percentile to be within given range (ex. [0.1, 30])
 - c-2. Use centrality by V0 (fCentrality) for triggers MB or HMV0
 - c-3. Use centrality by SPD (fCentralSPD) for HMSPD
 - d. Reject duplicated events:
 - c-1. Outcome of the makeshift solution (check last report in Sep. 3)
 - c-2. Accept only events w/ “ fNeXiPair = 0 “ (duplicated events’ number is > 0)
- Some lines in the original code were modified or masked out, since
 - a. Not used at all
 - b. Causes segmentation fault

Prefilter corrected plots MB

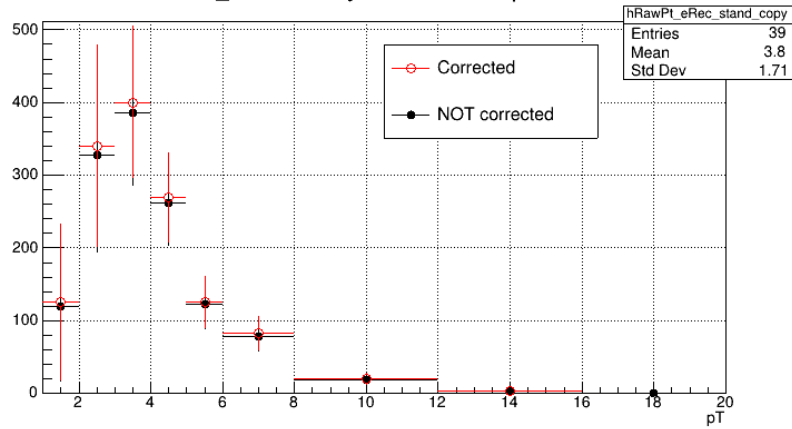

Prefilter corrected plots HMV0

Prefilter corrected plots HMSPD

HMSPD_0to30, Raw yields, w/o or w/ prefilter corr

HMSPD_0to30, prefilter eff

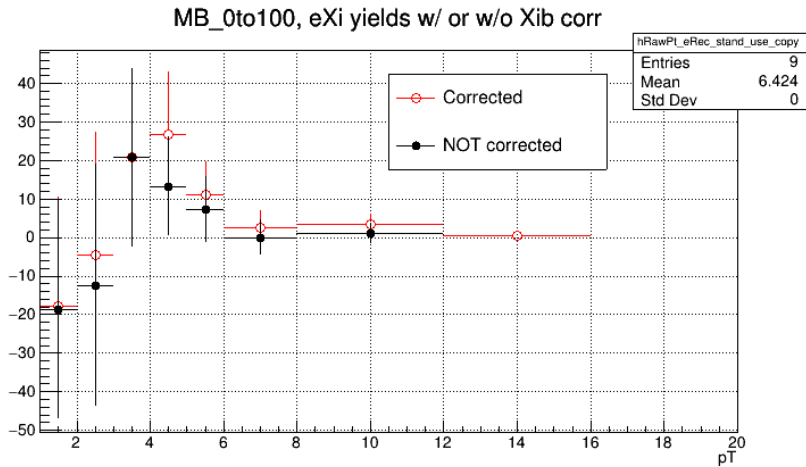

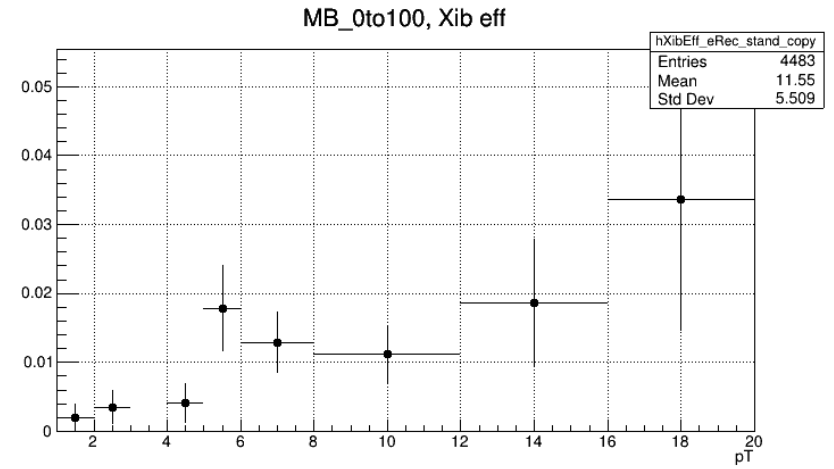

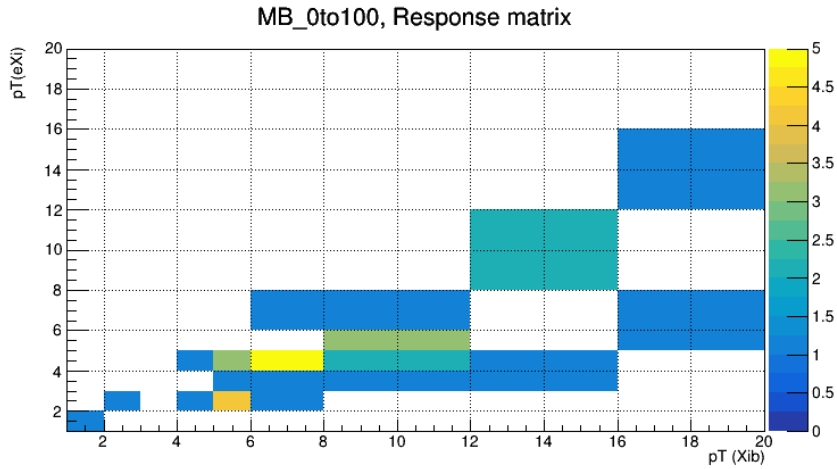

HMSPD_30to100, Raw yields, w/o or w/ prefilter corr

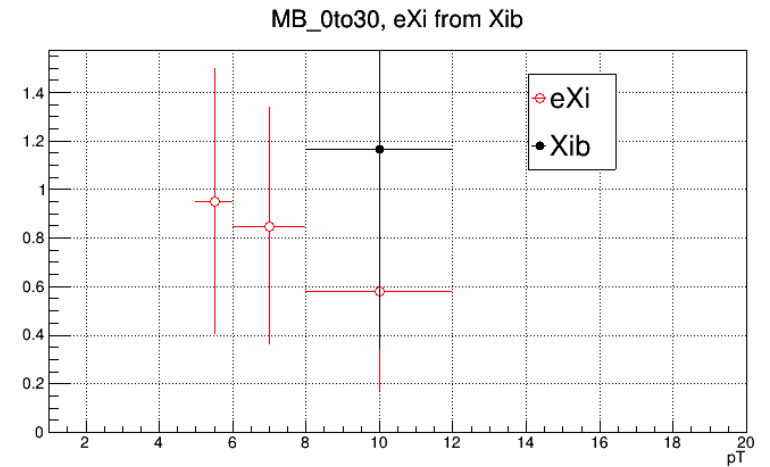

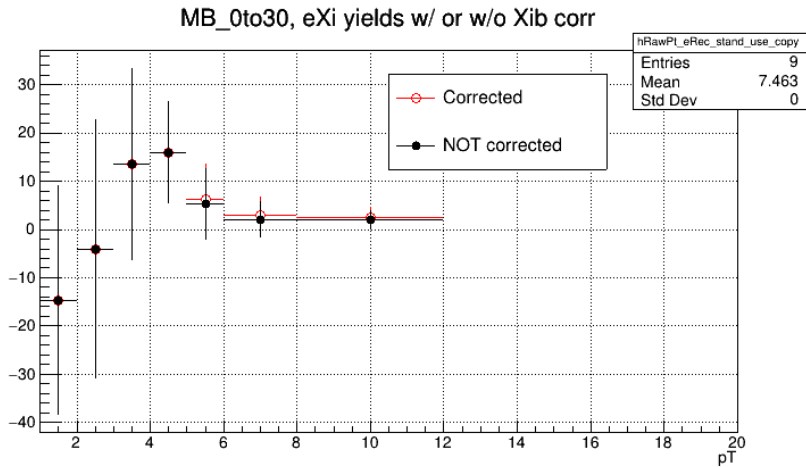

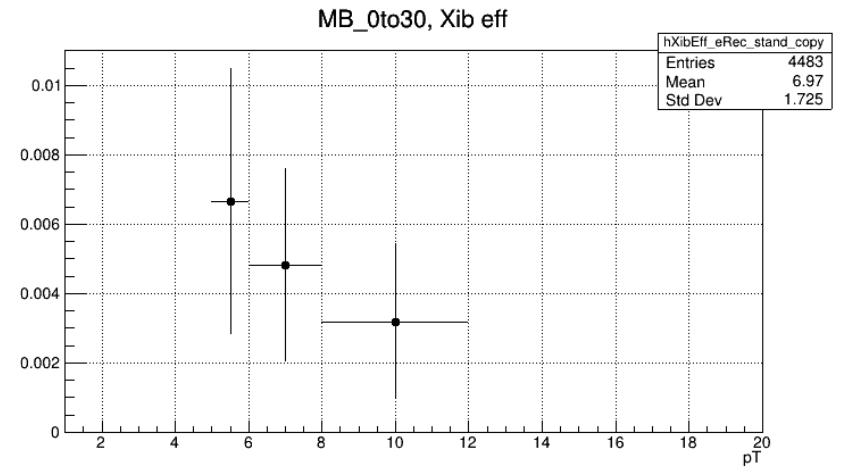

HMSPD_30to100, prefilter eff

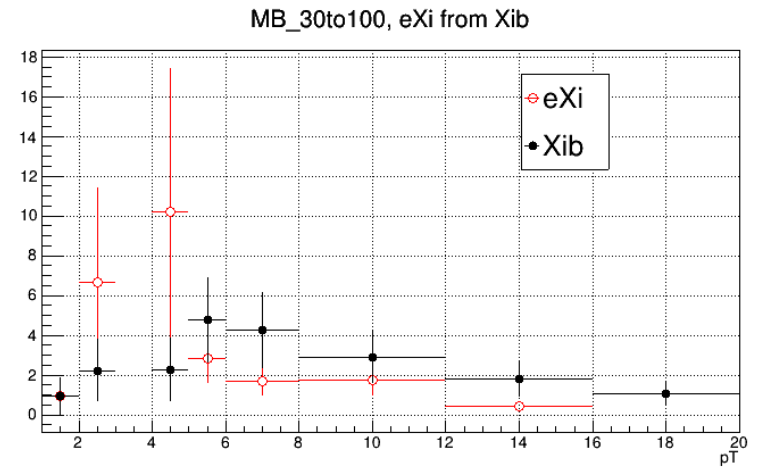

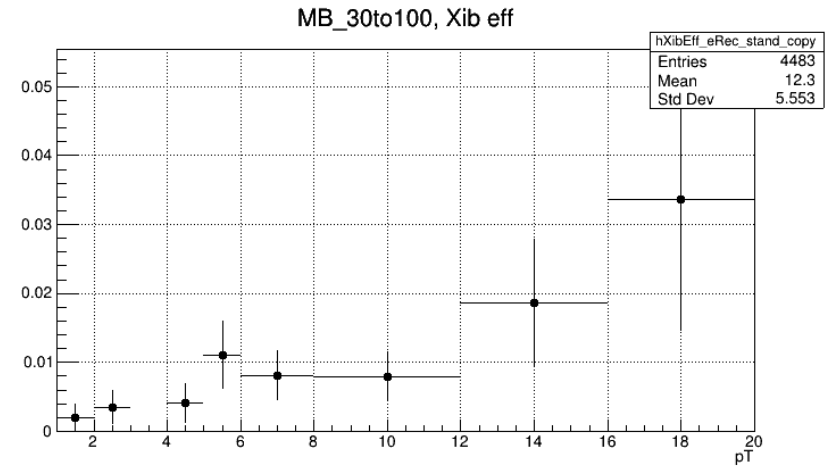

Bottom corrected plots MB, [0, 100]

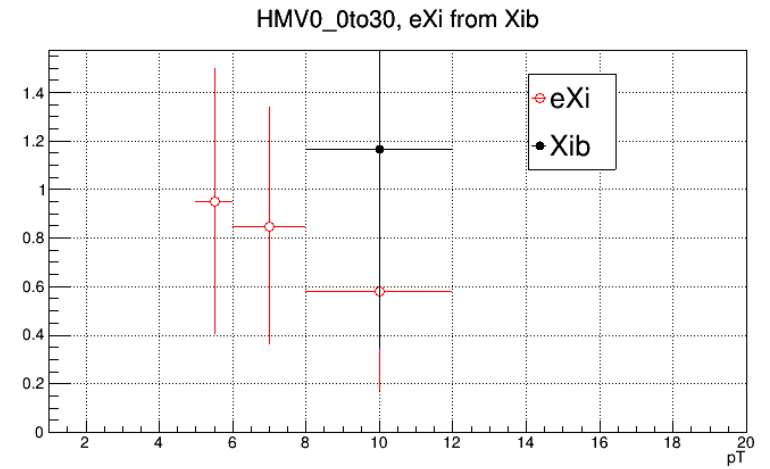

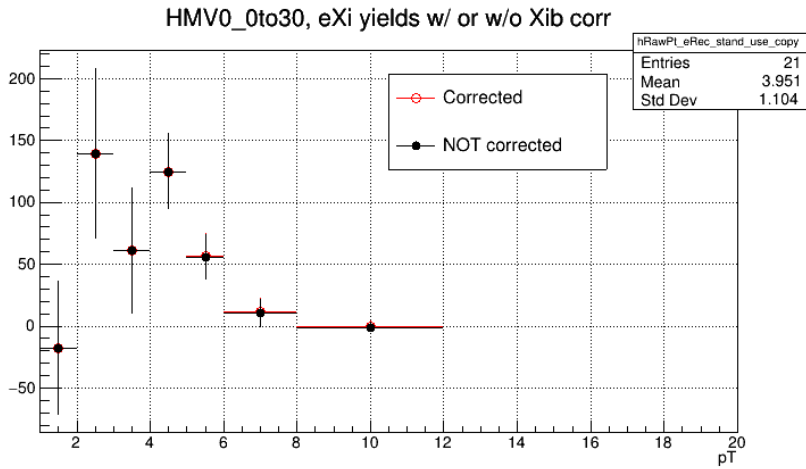

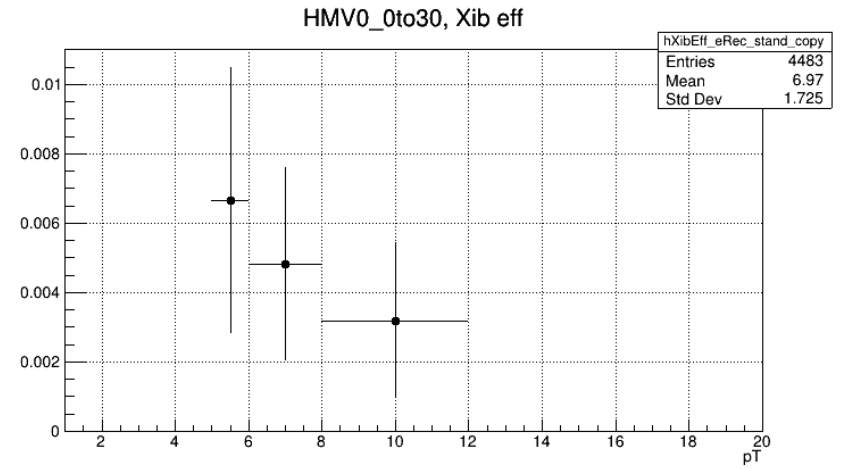

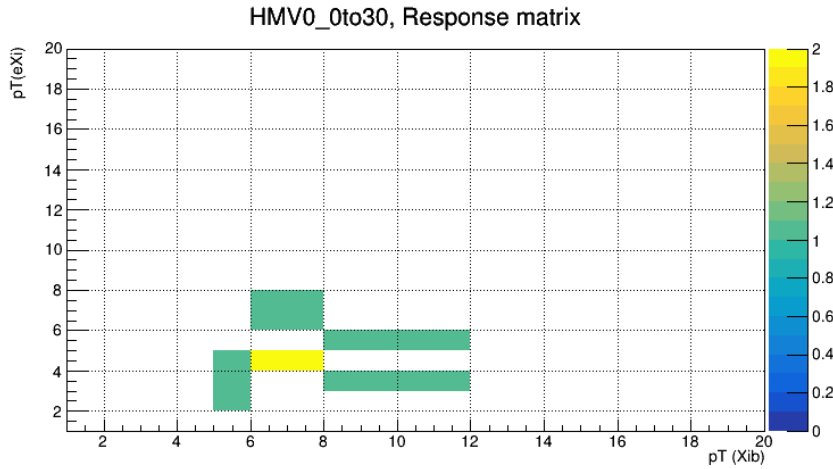

Backup Bottom corrected plot, MB + [0.1, 30]

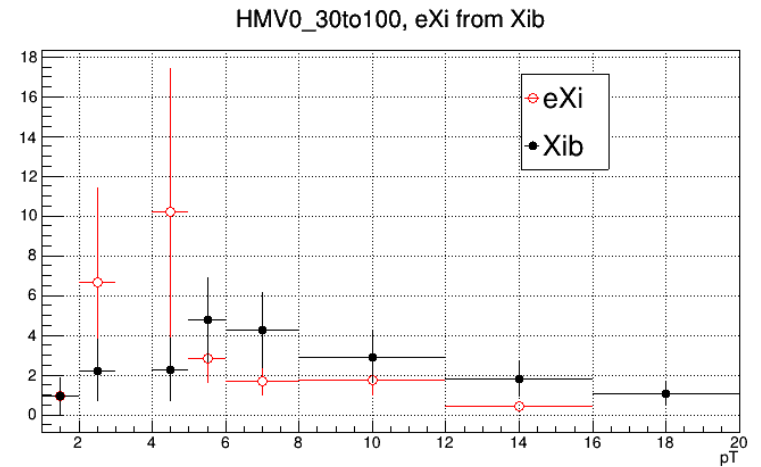

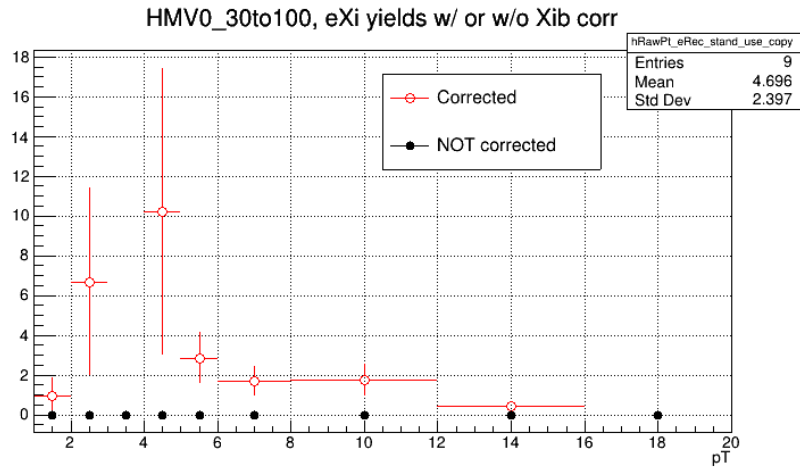

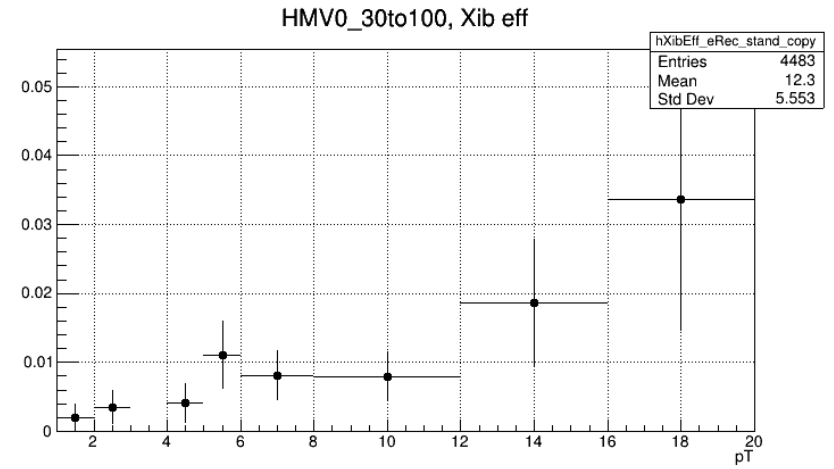

Backup Bottom corrected plot, MB + [30, 100]

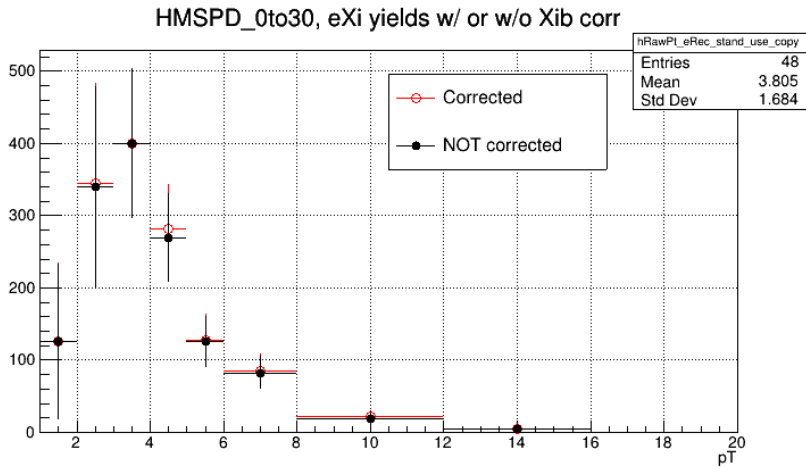

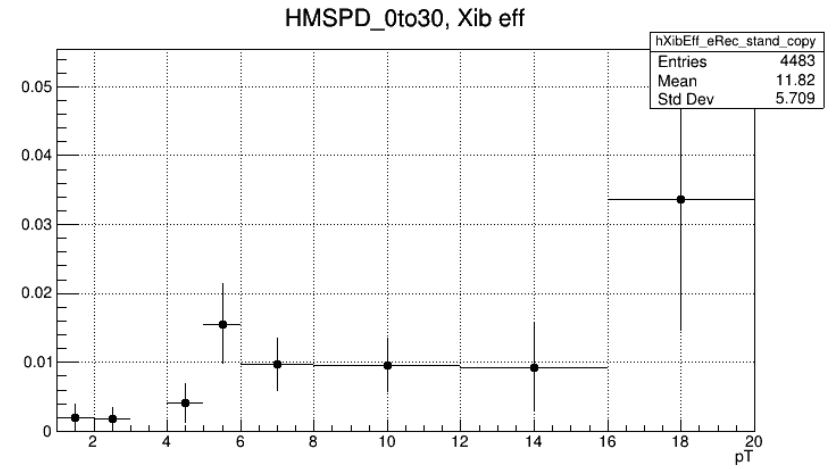

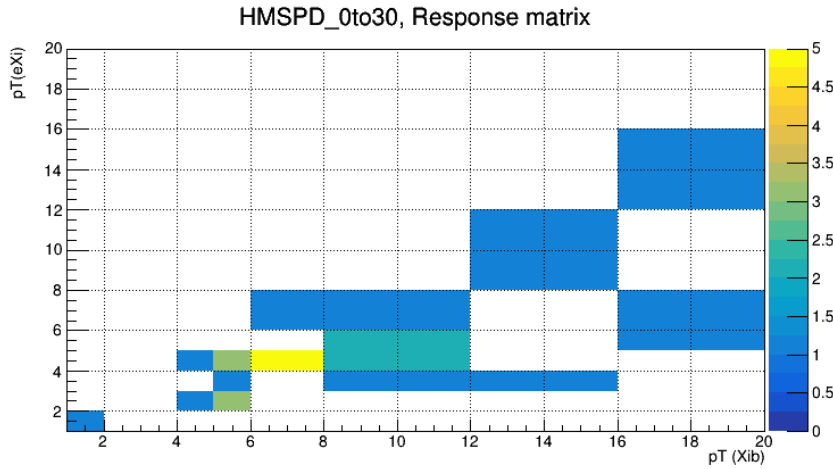

Backup Bottom corrected plot, HMV0 + [0.1, 30]

Backup Bottom corrected plot, HMV0 + [30, 100]

Backup Bottom corrected plot, HMSPD + [0.1, 30]

Backup Bottom corrected plot, HMSPD + [30, 100]
