# Form Factor, TMDs, and PFDs of the Pion in the Light-Front Quark Model

Ho-Meoyng Choi (Kyungpook National Univ., Korea)

Work in progress (with Prof. Chueng-Ryong Ji)

2<sup>nd</sup> CENuM Workshop for Hadron Physics, Dec. 18-19, 2023, Inha University

# Outline

- 1. Motivation
- 2. Why Light-Front?
- 3. Form Factors on the LF:
- New Development of self-consistent LFQM
- Pion Form Factor

4. Unpolarized Transverse Momentum Distributions(TMDs) of pion

5. QCD evolution of Pion Parton Distribution Functions (PDFs)

6. Conclusions

# The Electron-Ion Collider (EIC)

aims to provide detailed insights into the behavior of quarks and gluons...

Physics Topics at the EIC

- 1. Precision 3D imaging of protons and nuclei.
- 2. Search for gluon saturation.
- 3. Solving the proton spin puzzle.

# The Electron-Ion Collider (EIC)

aims to provide detailed insights into the behavior of quarks and gluons...

## Physics Topics at the EIC

- 1. Precision 3D imaging of protons and nuclei.
- 2. Search for gluon saturation.
- 3. Solving the proton spin puzzle.

#### **3D nucleon structure from 5D tomography**

 $(x, \mathbf{k}_{\perp})$ : Light front (LF)variables ...

## 1. Motivation

• Light-Front Dynamics(LFD) has been quite successful in describing various hadron properties such as Decay constants, DAs, PDFs, Form Factors, GPDs and TMDs etc.

Electromagnetic & Weak decay Process

**DVCS & DVMP** 

• We have developed a new self-consistent covariant LFQM for decay constants, DAs, and weak form factors (e.g.  $B \rightarrow Dll$ ) of mesons:

PRD 89, 033011(14); PRD91, 014018(15); PRD95, 056002(17) by HMC and C.-R. Ji PRD 103, 073004(21); Adv. High Energy Phys., 4277321(21) by HMC PRD 107, 053003(23); PRD108, 013006(23) by A. J. Arifi, HMC and C.-R. Ji

In this work, we apply our new developed LFQM to compute Form Factor, TMDs, and PDFs of Pion!

# 2. Why Light-Front?

Light-Front Dynamics (LFD) (by Dirac in 1949)

Hamiltonian	$P^0$	$P^- = P^0 - P^3$
Momentum	$\boldsymbol{P}_{\perp} = (P^1, P^2)$ $P^3$	$\begin{array}{c} P_{\perp} \\ P^+ = P^0 + P^3 \end{array}$
Energy-Momentum Dispersion Relation	$P^0 = \sqrt{M^2 + \vec{P}^2}$	$P^- = \frac{M^2 + \boldsymbol{P}_\perp^2}{P^+}$
	Irrational	vs. Rational

#### LF valence

**3.** Form Factors on the Light-Front

## 3. Form Factors on the Light-Front

 $\Rightarrow$  facilitates the <u>partonic interpretation</u> of the amplitude!

## 3. Form Factors on the Light-Front

 $\Rightarrow$  facilitates the <u>partonic interpretation</u> of the amplitude!

(e.g.) E&M form factors of pseudoscalar and vector mesons

$$x = \frac{k^+}{P^+}$$

$$F(Q^2) = \int [dx][d^2\mathbf{k}_{\perp}] \psi_f^*(x, \mathbf{k}'_{\perp}) \psi_i(x, \mathbf{k}_{\perp}) \quad for J^+ \& \mathbf{J}^{\perp}$$

$$\psi_i(x, \mathbf{k}_{\perp}) \quad \psi_f(x, \mathbf{k}'_{\perp})$$

3. Form Factors on the Light-Front

Nonvanishing : LF Zero-Mode !

 $\square$  One has to take into account of the zero mode in using  $J^-$  current!

## Light-Front Quark Model(LFQM)

Meson state: Noninteracting "on-mass" shell  $Q \& \overline{Q}$  representation consistent with Bakamjian-Thomas(BT) constuction!

The interaction is added to the mass operator

$$M_{Q\bar{Q}} = \left\langle \Psi \middle| H_{Q\bar{Q}} \middle| \Psi \right\rangle$$

$$H_{Q\bar{Q}} = \sqrt{m_Q^2 + \vec{k}^2} + \sqrt{m_{\bar{Q}}^2 + \vec{k}^2} + V_{Q\bar{Q}} \qquad V_{Q\bar{Q}} = a + br - \frac{4\kappa}{3r} + \frac{2\vec{S}_Q \cdot \vec{S}_{\bar{Q}}}{3m_Q m_{\bar{Q}}} \nabla^2 V_{\text{Coul}}$$

Refs.) PRD59, 074015(99); PLB460, 461(99) by HMC and CRJ; PRC92, 055203(2015) by HMC, CRJ, Z. Li, and H. Ryu PRD106, 014009(2022) by A. J. Arifi, HMC, and CRJ

General structure for  $P(P) \rightarrow P(P')$  transition:

$$\langle P' | \bar{q} \ \gamma^{\mu} \, q | P \rangle = \mathscr{D}^{\mu} \, F(q^2) \, + q^{\mu} \, \frac{(M^2 - M'^2)}{q^2} H(q^2), \qquad \mathscr{D}^{\mu} = \, (P + P')^{\mu} - q^{\mu} \, \frac{(M^2 - M'^2)}{q^2}$$

$$q^{\mu} = \, (P - P')^{\mu}$$

General structure for  $P(P) \rightarrow P(P')$  transition:

$$\langle P' | \bar{q} \ \gamma^{\mu} \, q | P \rangle = \mathscr{D}^{\mu} \, F(q^2) \, + q^{\mu} \, \frac{(M^2 - M'^2)}{q^2} H(q^2), \qquad \mathscr{D}^{\mu} = \, (P + P')^{\mu} - q^{\mu} \, \frac{(M^2 - M'^2)}{q^2} \\ q^{\mu} = \, (P - P')^{\mu}$$

For elastic process(M = M'), only gauge invariant form factor  $F(q^2)$  survives!

$$\langle P' | \bar{q} \ \gamma^{\mu} \ q | P \rangle = \mathscr{P}^{\mu} F_{P}(q^{2}) \qquad \mathscr{P} \cdot q = 0$$

$$\langle P'|\bar{q} \ \gamma^{\mu} q|P \rangle = \mathscr{P}^{\mu} F_{P}(q^{2}), \qquad \mathscr{P}^{\mu} = (P+P')^{\mu} - q^{\mu} \frac{(M^{2}-M'^{2})}{q^{2}}$$

In  $q^+ = 0$  frame,

$$\langle P' | \bar{q} \ \gamma^{\mu} \ q | P \rangle = \int_0^1 \mathrm{d} p_1^+ \int \frac{\mathrm{d}^2 \mathbf{k}_{\perp}}{16\pi^3} \ \phi'(x, \mathbf{k}'_{\perp}) \phi(x, \mathbf{k}_{\perp}) \ \sum_{\lambda' s} \mathcal{R}^{\dagger}_{\lambda_2 \bar{\lambda}} \left[ \frac{\bar{u}_{\lambda_2}(p_2)}{\sqrt{x_2}} \gamma^{\mu} \frac{u_{\lambda_1}(p_1)}{\sqrt{x_1}} \right] \mathcal{R}_{\lambda_1 \bar{\lambda}},$$

$$F_P^{(\mu)}(Q^2) = \int_0^1 \mathrm{d}p_1^+ \int \frac{\mathrm{d}^2 \mathbf{k}_\perp}{16\pi^3} \,\phi'(x,\mathbf{k}_\perp')\phi(x,\mathbf{k}_\perp) \,\frac{1}{\wp^\mu} \,\sum_{\lambda's} \mathcal{R}^\dagger_{\lambda_2\bar{\lambda}} \left[ \frac{\bar{u}_{\lambda_2}(p_2)}{\sqrt{x_2}} \gamma^\mu \frac{u_{\lambda_1}(p_1)}{\sqrt{x_1}} \right] \mathcal{R}_{\lambda_1\bar{\lambda}},$$

$$\langle P'|\bar{q} \ \gamma^{\mu} q|P \rangle = \mathscr{P}^{\mu} F_{P}(q^{2}), \qquad \mathscr{P}^{\mu} = (P+P')^{\mu} - q^{\mu} \frac{(M^{2}-M'^{2})}{q^{2}}$$

In  $q^+ = 0$  frame,

$$\langle P' | \bar{q} \ \gamma^{\mu} \ q | P \rangle = \int_{0}^{1} \mathrm{d}p_{1}^{+} \int \frac{\mathrm{d}^{2} \mathbf{k}_{\perp}}{16\pi^{3}} \ \phi'(x, \mathbf{k}_{\perp}') \phi(x, \mathbf{k}_{\perp}) \ \sum_{\lambda' s} \mathcal{R}_{\lambda_{2}\bar{\lambda}}^{\dagger} \left[ \frac{\bar{u}_{\lambda_{2}}(p_{2})}{\sqrt{x_{2}}} \gamma^{\mu} \frac{u_{\lambda_{1}}(p_{1})}{\sqrt{x_{1}}} \right] \mathcal{R}_{\lambda_{1}\bar{\lambda}},$$

Apply 
$$P^- = p_q^- + p_{\bar{q}}^-$$
 (i. e.  $M^2 \to M_0^2$ )  
New Effective Method

$$F_P^{(\mu)}(Q^2) = \int_0^1 \mathrm{d}p_1^+ \int \frac{\mathrm{d}^2 \mathbf{k}_\perp}{16\pi^3} \,\phi'(x,\mathbf{k}_\perp')\phi(x,\mathbf{k}_\perp) \,\frac{1}{\mathscr{P}^{\mu}} \,\sum_{\lambda's} \mathcal{R}^{\dagger}_{\lambda_2\bar{\lambda}} \left[ \frac{\bar{u}_{\lambda_2}(p_2)}{\sqrt{x_2}} \gamma^{\mu} \frac{u_{\lambda_1}(p_1)}{\sqrt{x_1}} \right] \mathcal{R}_{\lambda_1\bar{\lambda}},$$

Then we get 
$$F_{\pi}^{(+)}(Q^2) = F_{\pi}^{(\perp)}(Q^2) = F_{\pi}^{(-)}(Q^2)$$

$$F_{\pi}^{\text{SLF}(\mu)}(Q^2) = \int_0^1 dx \int \frac{d^2 \mathbf{k}_{\perp}}{16\pi^3} \frac{\phi(x, \mathbf{k}_{\perp})\phi'(x, \mathbf{k}'_{\perp})}{\sqrt{\mathbf{k}_{\perp}^2 + m^2}\sqrt{\mathbf{k}_{\perp}'^2 + m^2}} O_{\text{LFQM}}^{(\mu)}$$

TABLE II: The operators  $O_{\text{LFQM}}^{(\mu)}$  and their helicity contributions to the pion form factor in the standard LFQM.

"The first proof of the pion form factor's independence from current components in the LFQM!"

C. Lorcé, B. Pasquini, and P. Schweitzer,

EPJC76,415(2016)

$$\int \frac{[dz]}{2(2\pi)^3} e^{ip \cdot z} \langle P | \bar{\psi}(0) \gamma^+ \psi(z) | P \rangle |_{z^+=0} = f_1^q(x, p_T),$$

## **5.** Conclusions

We developed a new method for the covariant analysis of LFQM

Our LFQM: Noninteracting  $Q \& \overline{Q}$  representation consistent with the Bakamjian-Thomas(BT) constuction!

 $P^- = p_q^- + p_{\bar{q}}^-$  , i.e.  $M^2 \rightarrow M_0^2$ 

 $\langle 0 | \bar{q} \Gamma^{\mu} q | P \rangle = \mathfrak{F} \mathfrak{S}^{\mu} \qquad \mathfrak{F}: \text{ physical observables } (\mathfrak{F} = f_P, F \cdots)$  $\mathfrak{S}^{\mu}: \text{ Lorentz factors } (\mathfrak{S} = P^{\mu} \cdots)$  $\mathfrak{F} = \langle 0 | \bar{q} \frac{\Gamma^{\mu}}{\mathfrak{S}^{\mu}} q | P \rangle = \iint dx \ d^2 \mathbf{k}_{\perp} \cdots \left( \frac{\Gamma^{\mu}}{\mathfrak{S}^{\mu}} \right) \cdots$ Constrained by BT construction!

We obtain physical observables independent of  $\mu$ , paving the way for the development of the self-consistency in the LFQM.
